

CLOUD DEFENSIVE

PRESS RELEASE

Cloud Defensive is proud to announce that its USA-made Optimized Weapon Light (OWL) has successfully been launched and is now shipping to distributors and dealers world-wide.

The Optimized Weapon Light is a next-generation rifle-mounted weapon light with advanced features, capability, performance and durability unlike any other in existence today.

Utilizing a Patented 3-piece design, the OWL features an integrated M1913 Picatinny mount with Quick-Detach head/tail assemblies allowing for the light to be mounted in left hand or right hand configurations. It features an integrated pressure switch that is highly responsive and gives the end-user both momentary and constant-on capability. It is a tool-free design, courteous of a built-in socket tool in the tail cap. A heat-treated S7 Tool Steel bezel ring and 3mm glass lens ensures the light can be used as an impact-tool if needed. The lens is serviceable in the field as well.

The OWL provides the end-user with over 50,000 Candela which is at least 40% more power than it's closest rival. This allows the user to throw light further and put more light on the target downrange, allowing the end-user to engage targets at distances that were previously not possible. It also yields an impressive and disabling 1250 lumens.

Finally, the OWL is made by Cloud Defensive, at it's own facility. The result is a level of quality and durability others can not match. Its virtual indestructible design is readily apparent. Meeting ANSI/PLATO FL-1 standards was simply not enough. The OWL goes much further. It's shock-proof, dust-proof, impact-proof and impressively, sports an IPX-8 waterproof rating to 200ft for 24 hours. The OWL features a lifetime warranty as well.
