

HERNON®

THE WORLD LEADER IN AMMUNITION SEALANT TECHNOLOGY

New Bench-top Ammunition Sealing Machine is Released to Seal Small Batches and Support R&D

SANFORD, Fla. August 14, 2019 -- Hernon Manufacturing Inc. is pleased to announce the release of a new bench-top ammunition sealing system. The Autosealer 5220 is designed to support small batch manufacturing and R&D projects. The new system offers the same Sureshot jet dispensing technology and Ultracure UV LED curing lights used in Hernon's larger industrial scale sealing systems in a condensed package. The Autosealer 5220 processes parts at up to 20 parts per minute and supports up to .50 caliber.

The new benchtop system is manually loaded by the operator and automatically aligns the cartridges into position for dispensing. After dispensing a wicking sealant onto the case-mouth and primer, the exposed sealant is cured in place using intense LED curing lights. Any non-exposed sealant cures anaerobically and the sealed ammunition comes off the machine ready to be handled, tested, packaged and shipped immediately.

Hernon is releasing the Autosealer 5220 in response to longstanding requests for a smaller more economical version of Hernon's ammunition sealing technologies. This new machine will support every tier of ammunition manufacturer. "We condensed the sealing system to the minimum and even removed the auto loading features of our other systems to get the cost as low as possible. When our customers speak, we listen and respond to support their needs". – Edgardo Rodriguez, Sales and Marketing Director. Ammunition manufacturers can meet with Hernon representatives and see a demonstration version of the Autosealer at DSEI 2019 in London and SHOT Show 2020 in Las Vegas.

Hernon Manufacturing, Inc. manufactures high performance adhesives and sealants as well as UV LED curing lights and precision dispensing equipment. With over 5,000 unique formulas and dozens of dispensing and curing products, Hernon's merchandise is utilized in a wide variety of industries for large scale manufacturing and MRO activities. Hernon Manufacturing, Inc is based out of their headquarters in Sanford, FL. and ships to over 60 nations worldwide through a network of distributors and partners with over 100 locations.
