## **Dogtra Introduces New Technology for 2-Dog Handlers with the T&B DUAL**

(Torrance, CA.) Dogtra, producer of the world's finest e-collars and dog training products, introduces the T&B DUAL. This revolutionary system allows hunters, trainers, and handlers to exercise total control over two dogs working together. The T&B DUAL comes as either a 2-dog system or a 1-dog system that can be expanded to 2-dogs.

Upland bird hunters often hunt with two dogs and the ability to have independent control over both animals is a huge plus during training and in the field. The new T&B DUAL provides that control without having to switch stimulation levels or utilize a second handheld transmitter, so the dog handler has full control at his fingertips.

Hunters and handlers demand quick communication of activity from their handheld transmitters and the new DUAL DIAL doesn't disappoint. The handheld transmitter features an OLED screen that shows the individual stimulation levels for each dog and features two 127-level Rheostat Dials that control the stimulation levels. The new T&B DUAL has an effective range of 1.5 miles and features a Run/Point Beeper Mode, single button Nick/Constant stimulation with a tap for Nick and hold for Constant, HPP Vibration, and Locate Beeper with adjustable pitch which fits the needs of upland hunters, trainers, and handlers.

The T&B DUAL system is created to be expandable and compatible with the 2700T&B receiver/collars.

Without question the new Dogtra T&B DUAL is the perfect tool for hunters, trainers, and/or handlers who demand total control of one or two dogs whether in a training, handling or field situation. Visit booth #1253 to see it in person!
