

## **Aero Healthcare to Debut 'Breakthrough' Tourniquet at Shot Show 2020**

Aero Healthcare, a leading provider of first aid and medical equipment, is to debut the new RapidStop tourniquet at the SHOT Show in Las Vegas, between 21-24 January 2020.

Researched and developed at MIT, with input from military personnel, physicians and paramedics, the RapidStop tourniquet features a number of technical innovations for fast and easy self-administered occlusion in the event of a serious limb injury.

Steven Santos, Global Sales Manager at Aero, said:

“It took several years of global research and development to master the design of the RapidStop tourniquet. Its unique buckle and ratchet system, patented rapid cinch technology, and the three-step application process makes it one of the fastest and smoothest tourniquets on the market. This tourniquet is an essential life saving device for men and women in today's society.

“We are extremely excited to confirm our attendance at the SHOT Show in January and look forward to showing why the RapidStop tourniquet and hemostatic bleeding range should be part of the standard equipment for military personnel, law enforcement officers, firefighters, emergency services personnel, first responders and civilians in high-risk employment or recreation. It really is a breakthrough for self-administered occlusion.”

Winner of an MIT Soldier Design Competition and proudly made in the USA, the RapidStop tourniquet will be showcased at booth 61621 on January 22nd 2020 and displayed in the SHOT Show new product showcase throughout the duration of the show.
