VICTOR COMPANY TAKES ACCURACY INTERNATIONAL AX RIFLES & CHASSIS  
TO THE NEXT LEVEL WITH THE NEW AX HR1 HANDGUARD

Victor Company USA, maker of top precision rifle accessories, has announced it's newest product, the AX Hammer Rail HR1 Handguard for the Accuracy International AX Rifles & AX Chassis.

Designed for the competitive precision rifle shooter, the AX HR1 Handguard delivers many distinct advantages. First, the AX HR1 Handguard features an "ARCA" style Dovetail rail at the six o'clock position to slide a bipod or tripod the full length of the handguard. This Dovetail Rail feature is a 'must have' when shooting competitively, as it allows the competitor to adapt to different shooting surfaces and quickly build a stable platform while under the clock. The wide, flat nature of the Dovetail Rail is perfect for helping stabilize a rifle on any surface. In addition, Victor Co has added a cross hatched texture underneath the rail to help add grip when shooting off of smooth wood or bags that tend to slide. Other top features include MLOK mounting slots, fore and aft Q.D. sling mounts, ergonomic design, and a lightweight form factor.

Starting at \$350, the AX HR1 Handguard is built for the competitive rifle shooter who must get the most performance from their Accuracy International AX rifle or AX chassis. Designed and machined in the US, the AX HR1 is made from hardened aluminum and finished in brown, green and black Cerakote.

Victor Company USA is based in Los Angeles CA and was established in 2010 to create the highest quality and most innovative precision rifle accessories available.
