Leapers UTG Booths 2146, 2246, 14803

Mission Statement:

To offer innovative, quality, value, and solution oriented products with complete concept-to-delivery services to customers everywhere around the Globe.

Established in 1992, Leapers, Inc. develops, manufactures, and distributes a wide variety of hunting and shooting sports oriented products across a multitude of different platforms. We started out as a garage business with our first ever product being a compact 4X28 scope. After more than 2 decades of hard work, Leapers, Inc. is now located in a 3-building, 150,000 sq. ft complex in Livonia, Michigan, the home and headquarters of our R&D and UTG PRO[®] USA advanced manufacturing and world-class order fulfillment center.

Our UTG PRO[®] product line started in 2009. Since then, our manufacturing operations equipped with industry-leading aerospace grade CNC machines and advanced RoboShot polymer injection molding machines produce quality USA made products and OEM parts to consumers and manufacturers on a daily basis. A dedicated part of our manufacturing space implements our fully in-house Cerakote[®] finishing facility, as well as, our Miyano 9-axis CNC Super Turning Centers, extending our services towards providing additional opportunities for our business partners looking for an end-all manufacturer. Our first UTG PRO[®] product SKU was an AR15 carbine-length drop-in quad rail that we continue to sell to this day. Now, UTG PRO[®] manufactures over 250 SKUs (excludes OEM) to include entire series of drop-in and free-float handguards, polymer stocks, buffer tubes, pistol accessories, and more. More recent additions to the USA made line include our TBNR[®] M-LOK[®] and Picatinny bipods and in 2020, the start of our UTG PRO[®] optic series with our very first 1-8X28mm 34mm FFP LPVO.

Right next door is our headquarters, which acts as our R&D center and main shipping and receiving hub. Providing a one-stop shopping experience requires seeing the whole picture from concept to delivery and customers have a wide variety of products to choose from designed and prototyped here, entirely in-house and backed by our very own graphics design, customer service, and sales team. We take special care and pay attention to the smallest of details when it comes to customer order fulfillment and understand the value and importance of customers receiving the correct products and quantities, undamaged out-of-the-box, and all within a timely manner. Like our UTG PRO[®] products manufactured right next door, we strive to constantly improve our business practices to better our services and have already made the switch to more environmentally friendly, energy saving, and resource efficient operations with the use of wireless and paperless fulfillment procedures, gravity-fed pallet flow racks, motion-sensor-controlled conveyors and lighting, and maximized shipping carton space algorithms within our warehouse.

Optimizing our company to better suit the individual business needs of our customers is the goal we have set our sights on for 2020. Further developing more efficient means of supporting our customers for them to reach new heights and establish a dominating presence in their regional marketplace is what we have to offer. With having a well established foot hole in the US and European market, our Michigan manufacturing and headquarters along with UTG Europe out of Germany continue to serve customers across the globe. In addition to the tailored and regional services they already provide, our UTG Taiwan manufacturing facility is 100% operational with research, development, manufacturing, and distributing already underway with new product lines including entirely new optics and accessories. We see 2020 as the year to make our largest strides in product research and development, advancing our technologies, and setting forth a new level of global distribution.
