TalonGrip™ Long Length Serrated Grip

MITEE-BITE PRODUCTS INTRODUCES the **TalonGrip™ Long Length Serrated Grip**. The new grips were produced as a “drop fit” into the original 6" TalonGrip™ jaw set and provides line contact the full length of workpiece. The standard TalonGrip™ grips are very popular due to being compact (.750" / 19mm) long, and designed to be placed anywhere in jaw whenever specific tooling clearance is required. All TalonGrips™ and VersaGrips™ remain a standard for fixturing when low-profile workholding is desired opposite our Pitbull® Clamps for the most demanding applications.

Manufactured from S7 steel, heat-treated and then finished with a black oxide coating, providing the toughest, lowest grippers available in the industry. Each long length grip is laser engraved with a 10mm scale, allowing the user multiple reference points when repeatable part placement is needed.

“We received countless requests for long grips and we’re excited to add them to our TalonGrip™ product line up”, said Mitee-Bite General Manager, David Bishop. “We are always striving to bring our customers innovative products designed to help increase productivity with a quick ROI.”

Mitee-Bite Products is an industry leader of innovative compact, low-profile edge clamps geared towards high density fixturing, improving productivity while maximizing machine capabilities. For more information visit their website www.MiteeBite.com.
