

Chiappa Firearms CBR-9 Black Rhino

Chiappa Firearms introduces the CBR-9 'Black Rhino' pistol, a brand-new weapon intended for personal defense and professional activities

With a substantial shift from its traditional production line, but following a logic started with the Rhino revolver, Chiappa Firearms introduces a new personal defense weapon: the **CBR-9 Black Rhino**. Not something "just like" anything else already seen around, the CBR-9 Black Rhino is an original project.

The **Chiappa Firearms CBR-9 Black Rhino** is a 9mm Luger semi-automatic pistol, built around a steel upper receiver hosting all mechanical components and a polymer lower receiver, hosting the ejector and the magazine, inside the grip, which provides a better balance in off-hand operation and shooting.

A blowback-operated pistol, the CBR-9 Black Rhino features a low-weight bolt and an inverted-operation, heavy hammer. This peculiar interlocking system between the hammer and the bolt provides an inertial increment for a superior reliability in all situations and with any load.

The CBR-9 Black Rhino feeds through double-stack, single-feeding proprietary magazines featuring a patented feed lip system that can withstand substantial use and undergo deformation without affecting negatively the overall reliability of the system. Magazines are available in 10, 18 and 30 rounds versions, depending from local laws and regulations.

Featuring a substantially lower barrel axis than many similar firearms on the market, the Chiappa Firearms CBR-9 Black Rhino provides superior controllability in rapid fire. A patented high-effectiveness flash hider drastically reduces muzzle blast for operation in low-light conditions when muzzle flash could impair the shooter's vision.

The CBR-9 weights 2,2 kilograms, but the barycenter is located in the area of the pistol grip, hosting the magazine, so offering a balanced off-hand operation also. The sliding (metal struts) stock e polymer buttstock, along with the front folding grip provide additional stability and precision shooting.

The Chiappa Firearms CBR-9 Black Rhino comes equipped with low-profile, high-visibility fiber-optic emergency sights. A full-length top MIL-STD 1913 Picatinny rail and two front rails at sides of the front grip offer plenty of room for flip-up open sights, red dot sights or other kind of accessories.

The Chiappa Firearms CBR-9 Black Rhino comes with a set of three safeties: an automatic safety against accidental hammer drop; a trigger safety; and a manual safety, to provide one of the highest levels of safety in a firearm of this class.

The Chiappa Firearms CBR-9 Black Rhino allows left-handed or right-handed operations: the slide stop release lever is ambidextrous, while the cocking handle, magazine release catch and the manual safety are reversible.

The location of all key components within the upper receiver makes cleaning and maintenance a breeze. The weapon strips AR-15 style, easily and without tools, by simply removing the flash hider and the large passing pin located at the back of the receiver.

Versions with a fixed stock or an armbrace and no folding foregrip, and a carbine variant with an 18.6" barrel shrouded in a faux suppressor are also available to comply with local laws and regulations.

SPECIFICATIONS

Manufacturer	Chiappa Firearms
Model	CBR-9 Black Rhino
Tipology	Selfloading pistol / selfloading carbine
Caliber	9x19 mm,
Action	Blowback, closed bolt
Trigger System	Single action
Safeties	Manual safety, trigger safety, automatic safety
Capacity	10, 18 or 30 rounds in double-stack magazines
Sights	Emergency, high visibility fiber-optic front and rear sights
Barrel Rifling	6 grooves, 1:12" twist
Barrel Length	225 mm / 9" or 472 mm / 18.6"
Total Length	430 mm/630 mm - 16.9"/24.8" (base model, stock closed/extended) 607 mm / 23.8" (fixed stock model) 855 mm / 33.6" (18.6" barrel model)
Weight (empty)	2,2 kg / 4.8 lbs (base model) 2,3 kg / 5 lbs (fixed stock model) 3 kg / 6.6 lbs (18.6" barrel model)
Materials	Steel, high resistance aluminum alloy, polymer
Finishes	Matte black

Company Notes

Started in 1958, CHIAPPA FIREARMS has grown to become an industrial group, still entirely owned by the Chiappa family. The Company brands now include Chiappa Firearms (firearms), Kimar (blank and signal guns), ACP (training systems), Costa (surface treatment of metals) and Chiappa Firearms USA (USA distribution center). Chiappa Firearms' wide range of products include muzzle loading and breech loading replicas of American historical weapons, lever action shotguns and rifles, sporting handguns and rifles in rimfire calibers, personal defense revolvers such as the famous Rhino, signal guns and air guns. As a direct result of the optimization of the manufacturing processes, the Company is rapidly developing a great capacity to innovate with flexibility and dynamism, spreading sales in 62 countries, capable of competing with the biggest companies in the world.
