

## ZASTAVA M91 In Demand

The M91 is a semi-automatic rifle fed from detachable 10-box magazines. In concept, it is similar to the Soviet Dragunov sniper/designated marksman rifle. While the design of the M91 is based upon an elongated version of the [AK-47](#) design just like its predecessor, the [Zastava M76](#), the M91 features several modifications, bringing it closer to the Dragunov rifle. The separate stock and pistol grip used on the M76 have been replaced with a thumbhole stock made of synthetic polymer material resembling that used on the Russian rifle. The 7.62x54mmR chambering of the Zastava M91 is the same as used in the Dragunov. The 7.62x54mmR is suited for long-range use, and replaced the 8x57mm IS round in Serbian service.

The barrel's bore is [chrome](#)-lined for increased corrosion resistance, and features 4 right-hand grooves with a [twist rate](#) of 240 mm (1:9.4 in).

Overall, the design of the flash suppressor, the detachable box magazine, the simplified PSO-type range-finder reticle used in earlier Zrak telescopic sights, the thumbhole stock and modified bolt carrier as well as a milled receiver strongly point at the Dragunov as the M91's design template.

Following are M91's features;

- 24 inch Hammer forged chrome lined barrel
- Threaded 14 x 1 left hand with tack weld muzzle nut
- 1.5 mm bulged trunnion receiver
- Ergonomic Stock set
- Chambered in 7.62x54R
- Adjustable gas flow regulator
