

Raptorazor Issued Patent on Revolutionary Field Dressing Knife Design

Haleiwa Hawaii, January 21, 2020

Raptorazor recently received notification of the issuance of a patent protecting the unique design of its revolutionary BIG GAME SKINNER.

The BIG GAME SKINNER is designed to improve the ease and speed of field dressing big game. It is designed as two knives in one. A concave hook blade can cut through up to 3-inches of hide. Its size allows it to also be spun 360-degrees around the lower leg to quickly remove the leg and hoof. The convex blade on the bottom of the BIG GAME SKINNER was inspired by Alaskan ulu knives and acts like a guided-skinning blade. By laying the housing of the knife on the flesh at the correct angle; the blade is held off the surface of the meat allowing rapid lateral movements of the blade to quickly skin the hide without nicking the hide or the meat.

The BIG GAME SKINNER also features a unique and revolutionary T-handle design. The T-handle insures a secure grip. Whether the user is wearing heavy gloves, has slippery or numb hands or has difficulty gripping due to arthritis or other reasons, he or she will not lose their grip on this knife. Although the razor-sharp blades that come with the BIG GAME SKINNER require little effort to cut through hide, the T-handle design allows the user to apply as much force as s/he may wish. The T-handle even comes with an integrated multi-tool and a rain-proof compartment for matches, medication or other small emergency items.

The razor-sharp replaceable blades insure that the hunter never needs to struggle with dull blades.

Rick Grover, the designer of the BIG GAME SKINNER and the founder of Raptorazor, Inc. said;

"We were very pleased to see the U.S. Patent Office grant us a patent on the BIG GAME SKINNER. The public response to this knife has been enormous and we are delighted to see its critical design elements protected".

About Raptorazor

Raptorazor is headquartered on the North Shore of Oahu, Hawaii. The company was founded by Rick Grover, a life-long hunter who saw an opportunity to make a better field dressing knife than had ever been developed. The Big Game Skinner with its patented T-Handle design was born out of Rick's personal needs as an avid hunter. Raptorazor's knives have been praised by hunters for their ability to cut field dressing time in half, reduce hand fatigue and generally make the process of field dressing game easier and more enjoyable. The Big Game Skinner and MANO Combo Set is the flag-ship product for the company but also available are a range of knives for butchering game, filleting and processing fish and for general use in the kitchen. Raptorazor's goal is to provide hunters and anglers with products and techniques to enhance their process of getting game or fish from the field to the table.
