

PRESS RELEASE: FOR IMMEDIATE RELEASE SHOT SHOW 2020

DATED: JANUARY 12, 2020

## NEW GROUNDBREAKING DRAKE ATHENA SEMIAUTOMATIC CHASSIS RIFLE SYSTEM

The **NEW GROUNDBREAKING AND PATENTED DRAKE ATHENA SEMIAUTOMATIC CHASSIS RIFLE** is the first of its kind. This is not like every other commercial semiautomatic AR series rifle on the market today that has been the same technology since the late 1950's. The ATHENA is a TRUE HIGH-PERFORMANCE SEMIAUTOMATIC MONOLITHIC PRECISION CHASSIS RIFLE with **TRUE FREE FLOAT TECHNOLOGY** derived from the high-performance bolt-action chassis rifle systems.

The ATHENA is designed specifically as a high-performance alternative to the Military's **M4/Mk12 (AR15) or Mk11/M110(AR10)** program(s), with a similar mission profile that features high-performance options at an affordable price. The ability of the Drake Athena Semiautomatic Chassis Rifle to quickly adjust the ergonomics for the individual shooter without having to use tools further personalizes the ATHENA with high-end bolt action rifle features. The ATHENA additionally features the tool-less Drake SOPMOD-D mission configurable forend insert for rapid changing of the weapons night vision / thermal system and accessory capabilities.

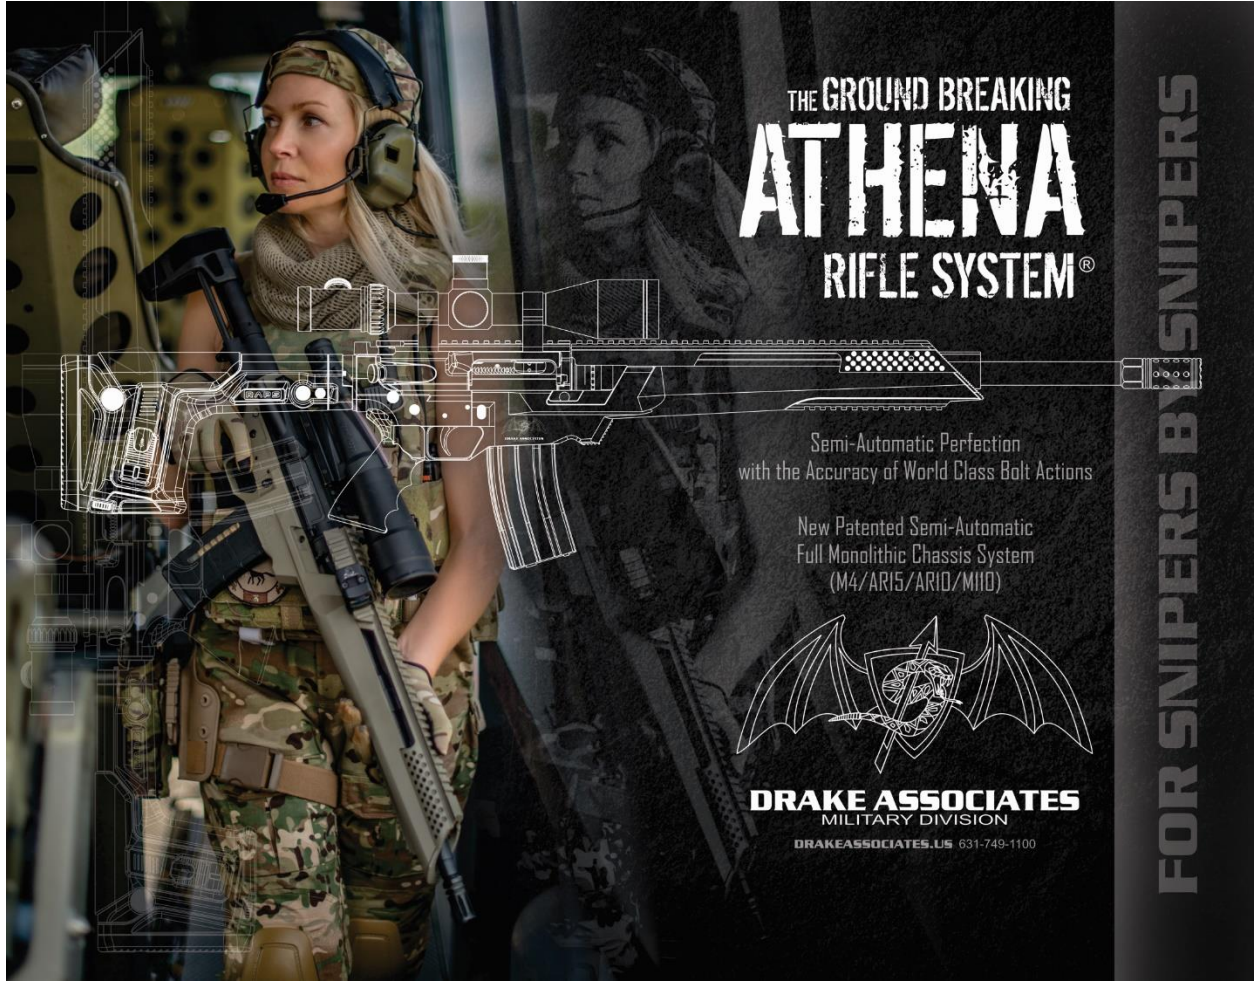

The ATHENA with an 18" Heavy Barrel was able to validate our design and technology resulting in the ATHENA platform pushing a MATCH 5.56 77gr OTM to 1062 yards with multiple qualification hits and making consistent documented .6-.7 SUB MOA performance at 100 yds. **The ATHENA system has SUBSTANTIALLY AND SIGNIFICANTLY INCREASED ACCURACY and PRECISION on the semiautomatic platform.**

ATHENA Weapon system is available at the following locations and times

- Press Conference Tuesday 1/21 2PM Drake Associates Booth 31007 L/E Section
