

33 XC Submission to NASGW

1. Submitted for the NASGW – POMA Caliber Awards.
2. Submitted by Peterson Cartridge Co. (a member since 2015)
3. Category: Best new ammunition
4. Our first run of this new cartridge was released to the public in November of 2018

The 33 XC is a new caliber designed for Extreme Long-Range shooting.

The 33 XC has the same head and tube base diameter as a .338 Lapua magnum, but with less taper in the body. It has a steeper shoulder angle. It's longer than a .338 LM and holds quite a bit more powder. It is even taller than a CheyTac.

..... Pic of .338 Lapua + .375 CheyTac + 33 XC

The concept of the 33 XC was developed by David Tubb, a long-time dominant force in the long-distance, competitive shooting community. He is also the designer of the 6 XC caliber. Recently Tubb turned his attention to Extreme Long-Range shooting, and the ELR community. He designed the 33 XC for shooters who have the gear to load and shoot .338 Lapua, who want to reach out farther.

Peterson Cartridge is a rifle casing manufacturer with a strong reputation in ELR circles. Peterson brass is used in winning the King-of-2-Mile competitions – first in 2017 and just recently in KO2M France. Peterson brass was used in the win of this year's Nightforce Challenge. Peterson brass figures

prominently in ELR Central competitions. Many shooters attempting new world-record long-distance shots use Peterson casings.

Because of this, Tubb contacted Derek Peterson president and head caliber developer at Peterson Cartridge to design the tool pack to make the new 33 XC. Peterson has successfully developed about two dozen different caliber tool packs across the last few years but the 33 XC was one of the largest.

The 33 XC is a high velocity, flat shooting caliber that allows shooters a new option for getting into ELR. As evidence of its efficacy, David Tubb set a new ELR Cold Bore world record on December 2nd 2018 with the 33 XC, attested to by FCSA – 2,200 yards.
