## For Immediate Release:

Field Optics Research, Inc. (American Fork, UT) is pleased to announce the release of our new PRO-MIL™ Series professional/MIL carbon fiber tripods.

The PRO-MIL™ Series tripods are a "start from scratch" redesign of the very successful BT Precision Series Tripod. Made in the USA for military and PRS/LR competitive shooting applications, the PRO-MIL™ Series is the strongest, most vestal, weapon support capable tripod in its class.

The new patent pending "Titan Leg Lock™" technology makes this a "one of a kind" design. This new invention allows for both "automatic leg angle adjustment" and "locked" angle positions for maximum strength and rigidity. (Absolutely necessary for multi-round rifle firing). The all new HD 32 mm dia x 1.2mm extra THK wall, 10-layer, diamond pattern, carbon fiber legs provide maximum strength & rigidity. The new HD carbon fiber tube and new O-ring sealed-extended length twist locks make the legs twice as strong as the same size BT Precision™ 32mm legs.

The PRO-MIL™ Series is ideal for Professional PRS/LR competitive shooting, LE/military sniper, high power spotting scopes, video, and long lens photography.

Combine the Precision Bowl Tensioner™ control handle and the Arca Swiss Picatinny Lever Clamp™ system to achieve the perfect shooting platform. Or convert to a flat top tripod or install the optional telescoping center tube assembly to meet any application.

**MADE IN THE USA**
