

# OPTIC READY FN FIVE SEVEN

## Dorin Technologies Inc Introduces DT-CAOS Optic Mounting System for the FN Five sevenN MK2

January 16<sup>th</sup>, 2020

For Immediate Release

Introducing DT-CAOS by Dorin Technologies Inc, a new patent-pending optic mounting system for the FN Five sevenN MK2. DT-CAOS allows you to mount an optic to your FN Five sevenN MK2 while keeping your rear sight intact.

DT-CAOS also improves on the aesthetics and functionality of the factory slide with sharper angles and more aggressive charging serrations. The front charging serrations have been moved forward for enhanced usability.

DT-CAOS includes a replacement polymer slide cover and proprietary hardware that allows you to easily install an optic directly to your factory slide with no permanent modifications to your pistol. When an optic is not in use, you can install the DT-CAOS cover plate so the improved aesthetics and charging serrations can still be taken advantage of.

DT-CAOS mounting plates and cover plate are CNC machined from 7075-T6 aluminum and then anodized and nickel acetate sealed for weight savings, high strength and aesthetics. The polymer slide cover is heat stable and can be baked at low temperatures for use with common gun coatings like Cerakote®.

DT-CAOS will be released in three configurations:

1. No optic mount, just the cover plate
2. With a Trijicon RMR® compatible optic mount and cover plate
3. With a Burris FastFire® compatible optic mount and cover plate

\*Mounts sold separately and additional mounting patterns are planned for the future depending on demand.

Dorin Technologies Inc is a firearms accessory manufacturer focused on innovative firearms solutions. We are exhibiting at Shot Show 2020 on the Next Pavilion (3<sup>rd</sup> Floor) at booth N235.
