**Armament Systems Unveils New Law Enforcement Products at SHOT Show**

*Show introductions include new batons, restraint systems, tactical flashlights and accessories*

**Las Vegas, NV, January 21, 2020**— Armament Systems and Procedures (ASP), a leading manufacturer of law enforcement products, will debut more than a dozen new additions to its product lines at the SHOT Show in Las Vegas this week. ASP is expanding all its key categories—expandable batons, restraints and tactical flashlights—with new products, including:

***Talon Infinity Expandable Batons—advanced design, unprecedented performance***

ASP calls its new Infinity series “the most advanced tactical batons ever developed.” These pushbutton-closing impact weapons incorporate fewer moving parts for more precise, reliable operation. Exclusive materials and construction ensure faster, smoother deployment and retraction and eliminate the need for routine lubrication. Available in black chrome-plated steel, Airweight aluminum and steel, or electroless nickel-plated steel, with two different grip and activation options. The new Talon batons are backed by ASP’s unprecedented Infinity Warranty—guaranteeing repair or replacement if the product fails for any reason, at any time, forever.

***Transport Plus—modular, four-limb restraint system with emphasis on officer safety and efficiency***

The Transport Plus is the latest addition to ASP’s growing line of restraints designed for corrections, transport and courtroom use. Like the original Transport Kit, the “Plus” has at its hub the company’s unique Rigid Ultra Cuff wrist restraints, which provide a central connecting point for other system elements, and keep the subject secured while components are added, removed or adjusted, for officer safety. The Transport Plus includes the rigid cuffs, a set of ankle cuffs, an extra-long chain to secure around the waist and connect the upper and lower elements, high-security auto-locking blocks and keys, all in a custom-made, molded carrying case.

***Spectrum DF Tactical Flashlight—four-LED-color, feature-packed light at a compelling price point***

The Spectrum is the company’s first-ever multi beam-color tactical flashlight. In addition to its primary white light, it offers red, green and blue beams, as well as a low level and strobe, for a total of six total modes. The high white mode is always the default, while any of the others can be user-programmed as a secondary level, activated with a double-tap of the tail switch. The all-aluminum light is built to demanding law enforcement duty standards, can be upgraded from its included CR123A battery power to Dual Fuel rechargeable, and carries a value-driven suggested retail of \$79.

These new products—and many more—will be on display at the SHOT Show, booth 11971. Media/editorial representatives are invited to contact Michael Hess, Vice President of Marketing, to schedule an appointment. E-mail [michael.hess@asp-usa.com](mailto:michael.hess@asp-usa.com).
