

MotoShot Announces Innovative Moving Target Products Will Be Displayed At SHOT Show 2020

Quick reaction time is a crucial focus of any effective firearms training program, and MotoShot is here to take your officers to the next level. Our DMT Bidirectional Turner forces your officers to decide whether the target is a friend or foe quickly. You'll be able to set the DMT Bidirectional Turner's paper target to turn in 1 to 4 seconds (your choice), and your trainees will make the call of whether to shoot. The duration and direction of the turn can either be automated or manually controlled via handheld remote - your choice. Multiple units can be controlled at once, simulating a real-life scenario for firearms training. The device is portable, maintenance-free, and suitable or indoor or outdoor use.

The DMT Bidirectional Turner is available either as a standalone item or as a part of MotoShot's Elite Robot system. If your department wants to practice with a moving target, the Elite Robot System will give you everything that you need to ensure state of the art preparedness among your team. If you're looking for a more budget-friendly option, the standalone DMT Bidirectional Turner is an excellent addition to any already-existing firearms training program.

MotoShot is known for staying on top of the latest trends in the firearms training world, and this year is no different. The MotoShot Elite and MotoShot DMT Bidirectional Turner will be displayed at <u>SHOT Show 2020 Booth #N226</u>.
