

HEL-STAR 6° Gen III+ Helmet Strobe

HEL-STAR 6° Gen III+, made by CORE Survival, Inc., is a helmet mounted strobe and personnel marker, offering the high capability of its predecessor with a lower profile lens. This upgrade enhances the optics while reducing bulk and height.

There are two visible and two IR (including SWIR) settings which can be programmed in a choice of colors, light intensity, spectrum and flash rates, including Morse Code letters: A, D, K, V, Z or SOS.

This field programmable light allows the ultimate flexibility in functions whether for a parachute, rescue or ground tactical environment.

White Flash exceeds the FAA 3 statute mile requirement for night-time parachute operations.
