

Dragoon QD 350 Titanium Rifle Suppressor

TiON Inc. is proud to introduce the revolutionary Dragoon QD 350 suppressor utilizing Total Breakdown Technology (TBT) and our Gas Indexing Technology (GIT) [U.S. Patent 9,410,761]. GIT allows the rotational orientation of baffles in a given stack providing optimum sound reduction capabilities for the 9mm pistol caliber shot from a rifle. Top rated sound reduction is achieved in the primary .350 Legend and 9mm calibers and very good performance in .300 Blackout.

As a bonus the suppressor will achieve good hearing safe performance on .223/5.56mm and .308 Winchester bolt action rifles.

In a market where heavy, welded, non-serviceable designs are the norm; the Dragoon distinguishes itself with an all Titanium takedown design. The TiON design with TBT allows the user to remove, clean and service ALL Components.

Features

The Dragoon QD 350 suppressor is machined from solid Titanium Bar Stock eliminating any weld failure points creating an extremely durable and light weight suppressor that can be serviced down to the piece parts.

Our Quick Disconnect design allows for one handed 2 second mounting/removal and achieves total repeatability of shot group. This QD design and smallest suppressor diameter in the industry

facilitates sliding under many metal firearm forends with short barrels for fast attachment without the need to have a removable forend section.

Seven QD mounts and flash hider/mounts are available in 13.5X1LHM, 1/2X28, 5/8X24 and 9/16X24 threads. All our mounts are Titanium adding to the unsurpassed light weight of the suppressor.

Dragoon .350 QD Technical Specifications Sound Pressure Level-Mil-Std 1474D Test @ 1 meter)

Caliber	Finish	Material	Length	MSRP	
Optimized for Rifles & Pistols with Braces chambered in 9mm and .350 Legend. Secondarily, it performs very well with .22LR, .300 Blackout. Bonus, Hearing safe on bolt action 5.56mm & .308Win rifles.
